ABOUT

"Frontend development is at the intersection of art and logic, business and expression, left brain and right brain, design and nerdery. I love it." - [Chris Coyer](#)

As a front-end engineer, I strive to build, be challenged, and learn from those around me. I've contributed to products from conception to completion, been the sole front-end developer at a startup, and worked on large teams full of talented experts.

I've spent the past few years at TED building experiences used by millions alongside a team I have the privilege to learn from daily. I've been fortunate to be empowered to make decisions, do what's needed to build great products, and learn from a team diverse in thought and perspective.

TECH

EXPERTISE

JavaScript, React, Gatsby, GraphQL, Next.js, Typescript, React Native, CSS3, HTML5

SOFTWARE

Git, VSCode, iTerm, Insomnia

SKILLS

Responsive web development, multivariate testing, interactive media, building feature-rich interfaces for large audiences, working on distributed teams

WORK

Dec 2016 - current
New York, NY (remote)

TED CONFERENCES, LLC SENIOR FRONT-END ENGINEER

Developed the front-end of the most visited pages on ted.com including the home, search, and video pages in close collaboration with design, product, and analytics.

- Built the front-end of two generations of the TED video page, the latest of which was built with Next.js, GraphQL, and Typescript.
- Developed and maintained ted.com using React, Emotion, Redux, and Webpack.
- Oversaw multivariate testing of feature MVPs to validate hypotheses and optimize for pageviews and engagement across ted.com products.
- Conceived and developed prototype features during hack weeks that were prioritized for production and resulted in increased engagement, including an 8% increase in inbound traffic from social sharing of talks.

Dec 2010 - Nov 2016
Miami Beach, FL

REDGAGE, LLC
FRONT-END DEVELOPER & UI DESIGNER

Coded and designed interfaces for web, iOS, and Android in a distributed team. Managed all phases of website and app creation from conception to release.

- Developed and designed fully-responsive iOS and Android apps written in ES6 JavaScript, JSON, CSS3, and HTML5. Apps created with Node, Webpack, Cordova/PhoneGap, React, and Less, and prototyped using Objective-C, Java, HTML5, and CSS3.
- Developed and designed a cross-platform social-media app to compete with top-tier social networks using JavaScript, Ruby, HTML5, CSS3. Frameworks utilized include Bootstrap and Less.

2008-2010
Fort Lauderdale, FL

CLOUD CREATURE DESIGN
FREELANCE DESIGNER & DEVELOPER

Worked with clients and created designs for print and web applications.

EDUCATION

June 2009
Fort Lauderdale, FL

BROWARD COLLEGE
ASSOCIATES OF ARTS IN ART & DESIGN

PROJECTS

REACT-NATIVE-SWIPEOUT
<https://github.com/dancormier/react-native-swipeout>

I built this open-source React Native component used in iOS and Android apps which adds “swipeout” buttons that revealed from behind a component. It is one of the most widely-included components for React Native apps. Used by Shopify, Ant Design, Jitsi Meet, and contributed to by the core React Native development team.

MALLORIE POTAZNICK, LMHC
<https://malloriepotaznick.com> (repository on Github)

When I was asked by my wife to build a website, I knew I needed to build something that could grow with her and make for easy content updates. I chose Gatsby coupled with Netlify CMS to give her a statically generated website that could grow with her needs.

Thanks for reading

All the best
